

We are
surrounded
by symbols.

SYMBOLS:

-  share information
-  create expectation
-  convey emotion
-  tell us what to do/not do
-  can change meaning

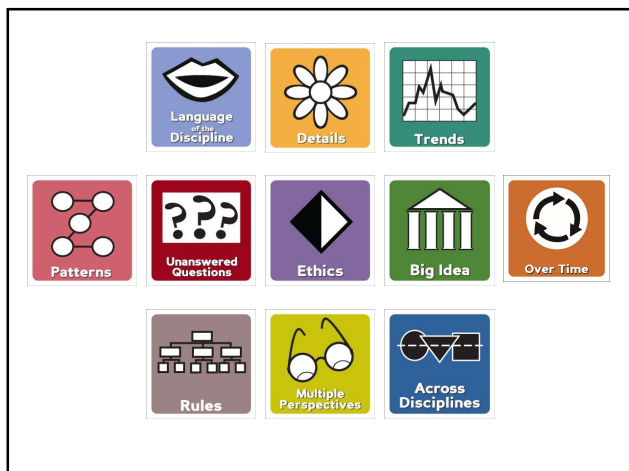

Think of a Symbol.

Criteria:

- easily recognizable
- emotion level ≥ 6
- be able to describe its effect (create expectation; convey info, etc.)

We're going to use
a particular set of
11 symbols to help
us engage with our
learning.

And they will...

- share information
- create expectation
- give common vocabulary
- tell us what to do/not do
- change meaning

bit.ly/intro-icons

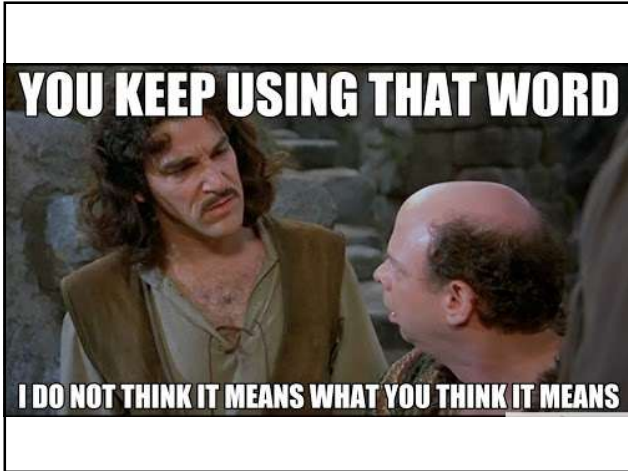

DEPTH & COMPLEXITY

LANGUAGE OF THE DISCIPLINE

"BUT ALWAYS HE LACKED THE
ESSENTIAL TOOL WITHOUT
WHICH THE WORKMAN CAN
NEVER ATTAIN TRUE MASTERY:

HE DID NOT KNOW THE NAMES OF ANY OF THE PARTS HE WAS BUILDING, AND WITHOUT THE NAME HE WAS ARTISTICALLY INCOMPLETE.

IT WAS NOT BY ACCIDENT THAT DOCTORS AND LAWYERS AND BUTCHERS INVENTED SPECIFIC BUT SECRET NAMES FOR THE THINGS THEY DID;

TO POSSESS THE NAME WAS TO KNOW THE SECRET.

WITH CORRECT NAMES ONE ENTERED INTO A NEW WORLD OF PROFICIENCY, BECAME THE MEMBER OF AN ARCAINE BROTHERHOOD,

A SHARER OF MYSTERIES, AND
IN THE END A PERFORMER OF
MERIT.

WITHOUT THE NAMES ONE
REMAINED A BUMBLER OR, IN
THE CASE OF BOATBUILDING,
A MERE CARPENTER."

JAMES MICHENER, *CHESAPEAKE*

Who am I?

Think of a field, domain, or
content area.

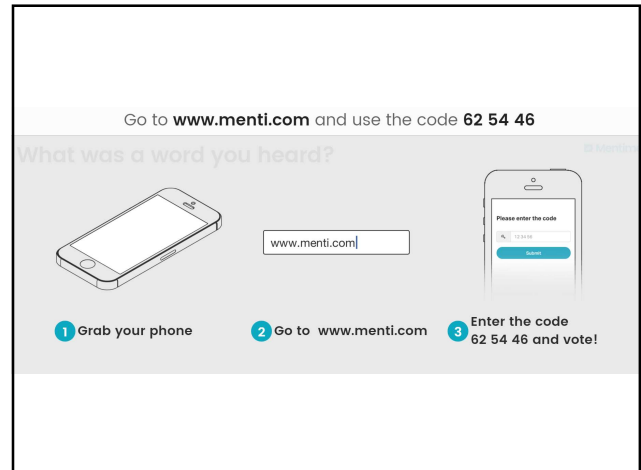

Next, think of 5 words that are
the LotD of that field & write
them on your Experience
Sheet.

Do not share.

Find someone from another table in your same card suit.

Share your words with each other and guess your respective fields.

If you finish before time is up, think of more words for the other person's list.

iMPLEMENT

iMPLEMENT: Elementary Science

What do these words have in common?

- cirrus
- stratus
- cumulonimbus
- stratocumulus

1. What are two words that are missing that should be on the list?
2. Draw a picture of one you think would not be good if you were at a picnic.

iMPLEMENT: Secondary Math

1. Why is this funny?
2. Draw the shape that best reflects this comic.
3. Think of another number that would work in the comic.

iMPLEMENT: Middle School ELA

Word Interview: Word conflict

What words mean the same as you?

What makes you happy?

Who or what is your best friend?

What do you dislike most?

If you could give anyone advice, who would you give it to and what would you say?

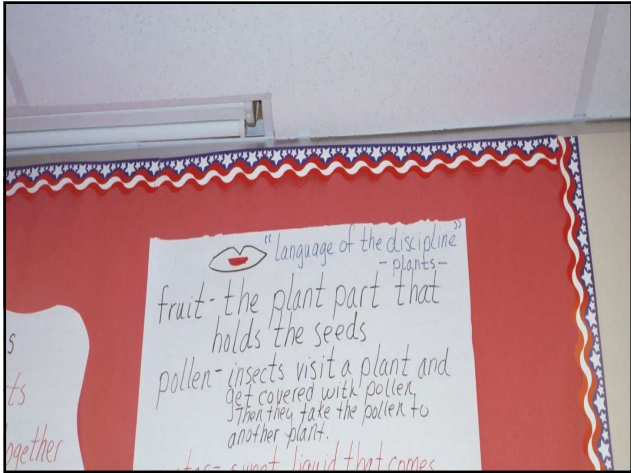

iMPLEMENT: World Languages

Change “tengo” to first person plural.

Write three nouns that begin with the third letter of the new conjugation.

Write an acrostic poem with one of the nouns using at least one verb, one noun, and one adjective.

DETAILS

It's in the DETAILS!

IMPLEMENT: Social Studies

List at least 8  details about Abraham Lincoln.

Which  details are most important?
How can you support that opinion?

What ideas do we most associate with him? 

iMPLEMENT: Middle School Science

Detail or Main Idea? 

- There are eight planets in our solar system.
- Our universe is constantly expanding.
- Black holes emit negative energy.
- Multiple moons affect tidal patterns.

iMPLEMENT: Middle School Science

Differentiate:

Infer the big idea associated with each  detail, and support the big ideas with at least three details.

iMPLEMENT: MS Art

Compare the attributes of the self-portraits of Rembrandt & Van Gogh. Include line, shape, form, texture, color, value, and space. 

SMART THINKERS...
PAY ATTENTION
TO DETAILS

What are the defining features
or characteristics?

→ examples & evidence to support
opinions & ideas

YOUR TURN

RULES

RULES

 IMPLEMENT: Secondary ELA

In *The Scarlet Letter*, are the rules society imposes on women fair?

How does it punish the breaking of those rules?

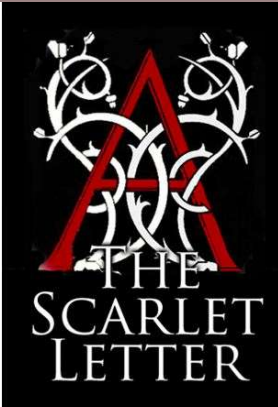

Who else is punished besides the rulebreaker and how?

 IMPLEMENT: Secondary ELA

Differentiate it:

Compare the rules society imposes on women in *The Scarlet Letter* to contemporary mores. Argue either that a) the rules have changed or b) the punishments are more subtle.

IMPLEMENT: Middle School PE

What constitutes a legal underhand serve for net & wall games such as badminton, volleyball or pickleball? Demonstrate three legal serves & one illegal serve.

https://commons.wikimedia.org/wiki/File%3APickleballs_on_Court.jpg

IMPLEMENT: Kinder Math

 845

Say: What does the 8 stand for in this number? It's 8 what?

iMPLEMENT: Kinder Math

6__

Say: How could we make this say 600? What would have to add?

iMPLEMENT: Kinder Math

Differentiate (dep. upon ability):

Create 6-digit numbers, following these rules:

- 1) At least one number must be odd.
- 2) At least one number must be able to be skip-counted by 3.
- 3) The number must end in with a digit that was not used in the number before.

iMPLEMENT: Kinder Math

Differentiate (dep. upon ability):

What rule of Roman numerals are these numbers breaking? Fix them.

19 = XIII
100 = VV

iMPLEMENT: Kinder Math

Differentiate (dep. upon ability):

What rule about Roman numerals do you see in both of these statements?

XL = 40
IX = 9

iMPLEMENT: Kinder Math

Differentiate (dep. upon ability):

Research how to write "36" in both
Mayan and Babylonian numerals.

iMPLEMENT: Secondary Science

Correct the names of these common
chemical compounds.

NaClO is sodium hypochlorite

$\text{C}_{12}\text{H}_{22}\text{O}_{11}$ is sucrose

$\text{MgSO}_4 \cdot 7 \text{H}_2\text{O}$ is magnesium sulfate
heptahydrate

***Differentiate it:***

Create a chemical compound (using
symbols only ☺) that has at least 6
elements, two of which must be carbon &
hydrogen (bonus: Why would I ask that?).

Write it using Hill System Order & name the
compound, following all naming rules.

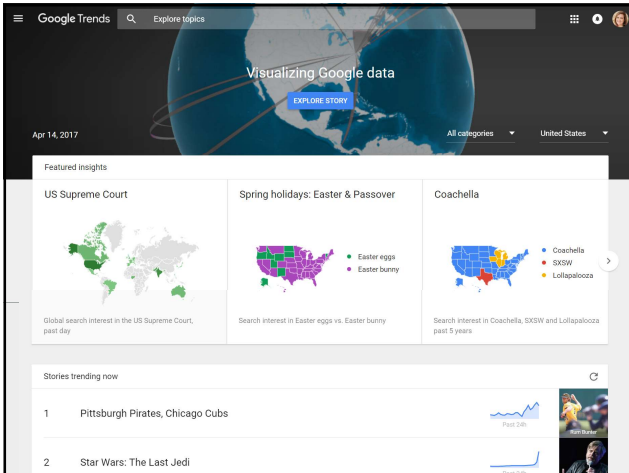

Invent a reasonable use for it.

Titanic NOT sunk by iceberg documentary claims

Millennium Problems

Yang–Mills and Mass Gap

Experiment and computer simulations suggest the existence of a "mass gap" in the solution to the quantum versions of the Yang–Mills equations. But no proof of this property is known.

Riemann Hypothesis

The prime number theorem determines the average distribution of the primes. The Riemann hypothesis tells us about the deviation from the average. Formulated in Riemann's 1859 paper, it asserts that all the "non-obvious" zeros of the zeta function are complex numbers with real part $1/2$.

P vs NP Problem

If it is easy to check that a solution to a problem is correct, is it also easy to solve the problem? This is the essence of the P vs NP question. Typical of the NP problems is that of the Hamiltonian Path Problem: given N cities to visit, how can one do this without visiting a city twice? If you give me a solution, I can easily check that it is correct. But I cannot so easily find a solution.

Navier–Stokes Equation

This is the equation which governs the flow of fluids such as water and air. However, there is no proof for the most basic questions one can ask: do solutions exist, and are they unique? Why ask for a proof? Because a proof gives not only certitude, but also understanding.

Hodge Conjecture

The answer to this conjecture determines how much of the topology of the solution set of a system of algebraic equations can be defined in terms of further algebraic equations. The Hodge conjecture is known in certain special cases, e.g., when the solution set has dimension less than four. But in dimension four it is unknown.

Poincaré Conjecture

In 1904 the French mathematician Henri Poincaré asked if the three dimensional sphere is characterized as the unique simply connected three manifold. This question, the Poincaré conjecture, was a special case of Thurston's geometrization conjecture. Perelman's proof tells us that every three manifold is built from a set of standard pieces, each with one of eight well-understood geometries.

Birch and Swinnerton-Dyer Conjecture

Supported by much experimental evidence, this conjecture relates the number of points on an elliptic curve mod p to the rank of the group of

Home → The Return Home → Nathaniel Pyle's Mission

Questions for Consideration

by Robert Hunt, Seattle, Washington

Concerning Lewis's mission and orders, it is true enough to say, as Jefferson himself did, rather scoldingly in a special context, that the mission was "single"—"the direct water communication from sea to sea." But, despite this statement and the literal terms of Jefferson's instructions, should the matter be left at that?

Was Lewis's task solely, even primarily, to find a Northwest Passage? Or the shortest route for commerce? Can he be faulted, or his mission considered a failure, for not finding something which did not exist? And was Jefferson's overriding premise "wrong," or his "rationale for the entire expedition . . . inherently flawed" on that account? Must not the surrounding historical and political circumstances of the Expedition come into focus here?

One turns to related documents for references about the mission. For example, the background for the British passport: the British Chargé d'affaires, Edward Thornton, noted in his report that the "ostensible object" of the voyage was "extending the external commerce of the country." But the "real picture of the plan," he said, "was otherwise, viz. 'individually scientific'."

—Albert Gallatin's observations for Jefferson's benefit while planning instructions for Lewis are especially revealing—indicating strategic concerns beyond a water route for commerce. Surely Lewis would have been aware of these concerns. . . . The comments of Madison, Lincoln and Gallatin, as well as background of the passport, suggest that the expedition was compelled by urgencies not solely definable as a search for the mythical Passage. For domestic legal and political niceties, it was couched (for those who could prove hostile to it) in terms of "commerce" via a water passage; but the question remains whether this was the *fundamental* motivation. Was not the *real* mission geopolitical?

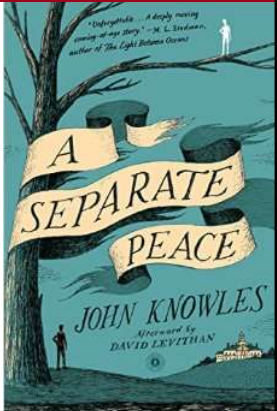

More questions:

Concerning the risk of dividing the party into smaller "defensible units," one recalls that the original concept of the Corps was for a body of not more than 8 or 10 men. In that light, was the Expedition "indefensible" at the outset? Jefferson himself felt that "such numbers will be sufficient to secure . . . against opposition of individuals or of small parties," but, with due admonishment for safety's sake, left to Lewis's discretion "the degree of danger" to be risked knowing full well that, as Lincoln had commented, "Capt. Lewis . . . will be much more likely, in case of difficulty, to push too far, than to not push too soon."

content in your
fave way.

{Here's an example}

99 strange collective animal names

Whether it's a shrewdness of apes or a zeal of zebras, lots of animals have bizarre names when they cluster into crowds.

Ist, we'll have a little fun with crazy names for groups of animals.

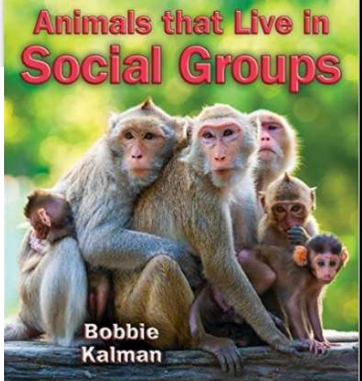

I'll flip the classroom & have them watch this video at home.

Next, they'll come back to class & we'll read this book, looking for connections between it and the video.

Why Live in Groups

There are several major disadvantages to living in groups:

1. Greater competition for food, mates, sleeping sites.
2. Increase parasite and disease load.

There is an incidental reason why some animals live in groups. E.g., birds don't nest on cliffs because they are attracted by a scarce resource: cliff swallows.

How do individuals benefit by living in groups?

1. **Cooperative food collection.** Wolves hunt together. By doing so each can more easily track and catch a large game. Although the individual has to share meat, each still benefits from group hunting. For example, hunting is less important in primates. Chimps hunt some but meat is not a major part of their diet. Hunting is important in many human societies, however.

2. **Sleeping together to conserve warmth.** This explains why individuals form groups at night but explain why groups are maintained during the day.

3. **Shared information.** By forming groups, individuals can share information. For example, frugivores let each other know where fruit trees are. (reciprocal altruism)

4. **Protection from predators.** There are three reasons why groups are maintained: 1. Group up to avoid predation.

My advanced learners will read a scholarly article instead.

Next, the students will create a tree map classifying animals by the reasons they group.

safety food social

Mandelbrot set

From Wikipedia, the free encyclopedia

The **Mandelbrot set** is the set of complex numbers c for which the function $f_c(z) = z^2 + c$ does not diverge when iterated from $z = 0$, i.e., for which the sequence $f_c(0)$, $f_c(f_c(0))$, etc., remains bounded in absolute value.

THIS IS
JUST A
DEFINITION

The Mandelbrot set is an example of a complex structure arising from the application of simple rules.

It is one of the best-known examples of mathematical visualization.

<p>Fractions, decimals, and percents are all related to 100.</p> <p>1/2 = 50% = 0.5</p>	<p>Geometry is the study of shapes and their properties.</p> <p>A circle has a radius and a diameter.</p>	<p>Statistics is the study of data and how to analyze it.</p> <p>A bar graph shows the frequency of each category.</p>

Fractions, Decimals, and Percents	Geometry	Statistics and Data Analysis
<p>Fractions, decimals, and percents have a ratio to 100%</p> <p>Example: 1/2 = 50%</p> <p>100% = 1.00</p> <p>100% = 1.00</p> <p>100% = 1.00</p>	<p>Geometry is the study of shapes and their properties.</p> <p>Example: A square has four equal sides and four right angles.</p> <p>Example: A circle has a radius and a diameter.</p> <p>Example: A triangle has three interior angles that sum to 180 degrees.</p>	<p>Statistics is the study of data.</p> <p>Example: A bar graph shows the number of students who like different fruits.</p> <p>Example: A line graph shows the temperature over time.</p> <p>Example: A pie chart shows the distribution of a population.</p>
<p>Fractions, decimals, and percents are used in many ways.</p> <p>Example: A recipe might call for 1/2 cup of sugar.</p> <p>Example: A store might offer a 20% discount.</p> <p>Example: A bank might offer a 3% interest rate.</p>	<p>Geometry is used in many fields.</p> <p>Example: Architects use geometry to design buildings.</p> <p>Example: Engineers use geometry to design machines.</p> <p>Example: Scientists use geometry to study the universe.</p>	<p>Statistics is used in many fields.</p> <p>Example: Doctors use statistics to study the effectiveness of treatments.</p> <p>Example: Politicians use statistics to understand public opinion.</p> <p>Example: Businesses use statistics to make decisions.</p>
<p>Fractions, decimals, and percents are also used in science and technology.</p> <p>Example: Scientists use fractions to describe the composition of matter.</p> <p>Example: Engineers use decimals to measure the length of objects.</p> <p>Example: Technicians use percents to calculate the efficiency of machines.</p>	<p>Geometry is also used in art and design.</p> <p>Example: Artists use geometry to create perspective drawings.</p> <p>Example: Designers use geometry to create aesthetically pleasing layouts.</p> <p>Example: Architects use geometry to create functional and beautiful buildings.</p>	<p>Statistics is also used in sports and entertainment.</p> <p>Example: Sports analysts use statistics to evaluate player performance.</p> <p>Example: Entertainment industry professionals use statistics to gauge the popularity of movies and TV shows.</p> <p>Example: Researchers use statistics to study human behavior.</p>

IMPLEMENT: Elementary Math

Ian's example...

Ask students to group up (or **work solo**). Give them these examples:

- $5^2 = 25$
- $4^2 = 16$
- $3^2 = 9$

Ask them to determine the job of that *incredible flying two*.

iMPLEMENT: Elementary Math

Lisa's example...

IMPLEMENT: Middle Math (8th)

Why can't these systems of linear equations be solved?
(eyes & brains only)

$$3x + 2y = 5 \text{ and } 3x + 2y = 6$$

$$2x + 6y = 12 \text{ and } 2x + 6y = 10$$

IMPLEMENT: Middle Math (8th)

Can these be solved?

$$3x + 2y = 5 \text{ and } 3x + 2y = 6$$

$$2x + 6y = 12 \text{ and } 2x + 6y = 10$$

Differentiate it (need support):

Big Idea: Some _____
can be _____ through
_____ and don't
need to be calculated.

Word Bank: solved inspection problems

Differentiate it (advanced):

Which of the two Big Ideas
below have the most application
to other math problems as well?

Some problems can be solved by
inspection and don't need calculation.

Variables must have unique values in
a system of equations.

IMPLEMENT: Elementary ELA (5th)

What can you
say about the
importance of
outdoor spaces
based on this
book alone?

IMPLEMENT: Elementary ELA (5th)

What other texts have we read this year that have the same or similar Big Idea?

IMPLEMENT: World Languages

How is a Big Idea in *Les Trois Petits Cochons* similar to a Big Idea in *Le Petit Chaperon Rouge*?

Il était une fois une maman cochon qui avait trois petits cochons. Elle les aimait beaucoup, mais comme il n'y avait pas assez de nourriture pour qu'ils puissent tous manger à leur faim, elle les a envoyés tenter leur chance dans le vaste monde.

**IS THIS GOOD, BAD,
OR NEUTRAL?**

**IS THIS GOOD, BAD,
OR NEUTRAL?**

OVER TIME

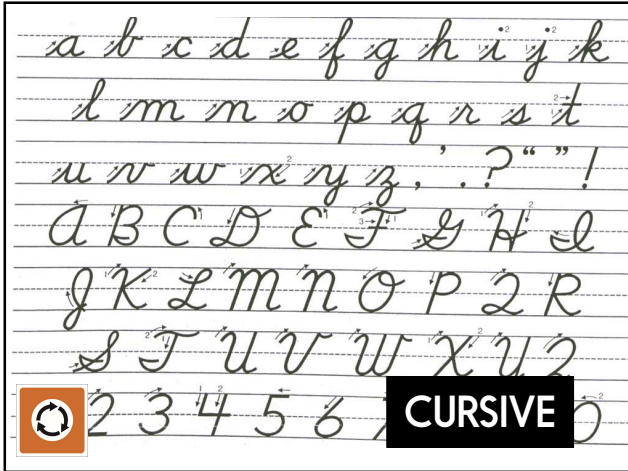

THINK OF AN
OBSOLETE PROBLEM.

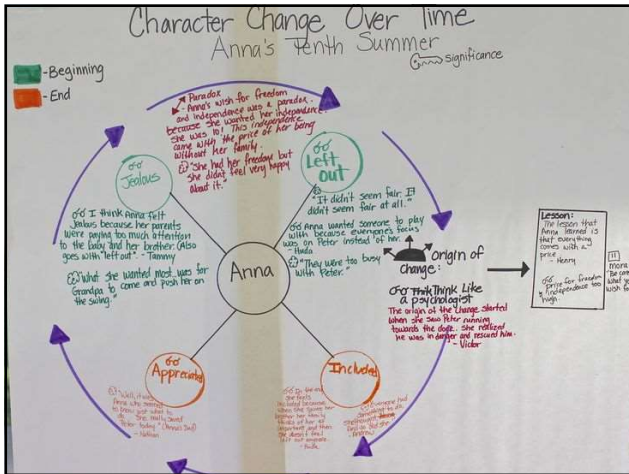

THINK OF A NEW
PROBLEM.

OVER TIME

IMPLEMENT: Secondary Math

Set up a uniform rate table for the challenge below:

A 555-mile, 5-hour plane trip was flown at two speeds. For the first part of the trip, the average speed was 105 mph. Then the tailwind picked up, and the remainder of the trip was flown at an average speed of 115 mph. For how long did the plane fly at each speed?

$$D = RT$$

	DISTANCE	RATE	TIME
1st PART	d	105 mph	t
2nd PART	$555 - d$	115 mph	$5 - t$
TOTAL	555 miles	-----	5 hours

Remember: $D = RT$

	DISTANCE	RATE	TIME	
1st PART	d	105 mph	t	$d = 105t$
2nd PART	$555 - d$	115 mph	$5 - t$	$555 - d = 115(5 - t)$
TOTAL	555 miles	-----	5 hours	

Ya with me, humanities peeps?

What happens over time to the plane?

Would it be fair to charge passengers more for planes that fly faster?

Differentiate it.

What would your hourly pay rate have to be to justify paying an extra \$150 for the faster rate of speed?

(trickstier than it looks)

This works well for velocity questions, too.

IMPLEMENT: Kinder Math

Which of these could be a bedtime?
A dinner time?
Sleeping time?

Differentiate it:

Think of something you would not be likely to do at these times.

When it's these times for you, what time is for people in Sydney, AU?

IMPLEMENT: Secondary ELA

Use the Thinking Map of your choice to compare and contrast a character as he/she changes from the beginning of the novel to the end.

IMPLEMENT: Secondary ELA

Imagine that there were a sequel written. What conflict might exist at the beginning of the sequel? Design a movie poster that uses a one-line slogan highlighting that conflict.

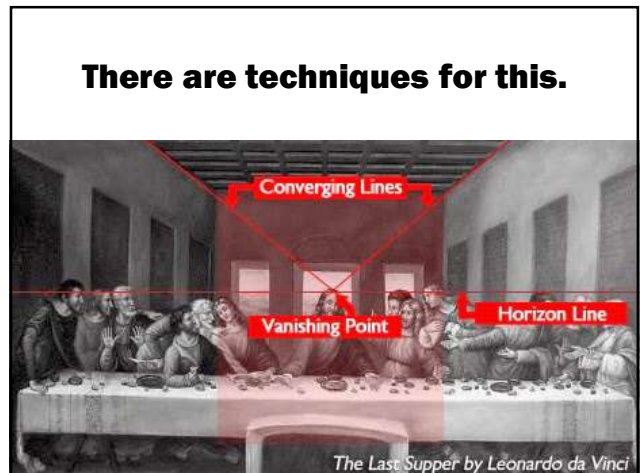

Perspective is an art technique for creating an **illusion of three dimensions (depth and space) on a two-dimensional (flat) surface.**

Perspective is what makes a painting seem to have **form, distance, and look "**real**".**

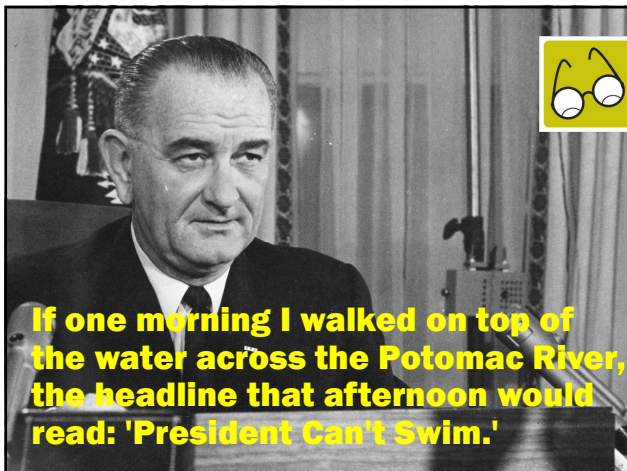

DIFFERENT
POINTS OF VIEW
OFTEN DEPENDENT UPON
TIME & PLACE & CULTURE
Ways of seeing & reporting
AFFECTED BY ROLES
& RESPONSIBILITIES

**Perspective affects
interpretation of
events, actions, and
even facts.**

**If one morning I walked on top of
the water across the Potomac River,

Which is more affected by gravity, the moon or Earth?

Debate: Because of gravity, planets with large masses are bossier than planets with a smaller mass.

89

IMPLEMENT: Secondary Math

The concepts of congruence, similarity, and symmetry can be understood from the perspective of geometric transformation. Fundamental are the rigid motions: translations, rotations, reflections, and combinations of these, all of which are here assumed to preserve distance and angles (and therefore shapes generally). Reflections and rotations each explain a particular type of symmetry, and the symmetries of an object offer insight into its attributes—as when the reflective symmetry of an isosceles triangle assures that its base angles are congruent.

Perspective is a central tenet of geometry.

State if the triangles in each pair are similar. If so, state how you know they are similar and complete the similarity statement.

1)

$\triangle UTS \sim$ _____

2)

$\triangle CBA \sim$ _____

3)

$\triangle UTS \sim$ _____

4)

You can be very simplistic, but please don't stop there.

7. $\triangle RST$ was dilated and then reflected over line m to create image $\triangle ABC$.

a) Which angle in the image is 63° ?

Choose:

- ☐ $\angle C$ ☐ $\angle S$
☐ $\angle B$ ☐ $\angle R$

You can be very simplistic, but please don't stop there.

State if the triangles in each pair are similar. If so, state how you know they are similar and complete the similarity statement.

1)

$\triangle UTS \sim$ _____

2)

$\triangle CBA \sim$ _____

3)

$\triangle UTS \sim$ _____

4)

How would a landscape architect use this?

7. $\triangle RST$ was dilated and then reflected over line m to create image $\triangle ABC$. 
a) Which angle in the image is 63° ?

Choose:

- ☐ $\angle C$ ☐ $\angle S$
☐ $\angle B$ ☐ $\angle R$

What words would a landscape artist use to describe this? 

Things can be very different from each other, and yet be similar in very important ways.

+

IMPLEMENT: Secondary ELA

Analyze two conflicts in the story from the perspectives of Finny and Gene.

Don't forget the product piece:

Create a cause and effect chain that explores the origins of the conflicts.

Differentiate it:

Choose one the following artists and select three of their works that best represent the narrative style of Gene. [poster]

- M.C. Escher
- Van Gogh

content in the center

The Gettysburg Address

Four years and seven weeks ago our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.

Now we are engaged in a great civil war, testing whether that nation, so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field, as a final resting place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But in a larger sense, we can not dedicate, we can not consecrate, we can not hallow the ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or deduct. The world will be very glad to have this place, but the living rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth.

—Abraham Lincoln

The Preamble

We the People of the United States, In Order to form a more perfect Union, establish Justice, insure domestic Tranquillity, provide for the common defense, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

Depth and Complexity Explained with Game of Thrones

Kaplan's Depth and Complexity is the crux of any gifted curriculum. I've had to explain it a few times recently to some new teachers at our school. Because many people watch Game of Thrones I thought that would be a great way to explain the meaning of these concepts. I thought I'd share them with you guys in case you are looking to use it with your kiddos and are also a fan of Thrones.

Unanswered Questions:

???

these are questions that are for example, not explained in a story. These can be details that are missing or storylines left unexplored. Sometimes you can find answers to these questions, sometimes they are unanswerable. We can speculate answers.

Instagram

About Me

I have been teaching a GT kindergarten class for several years now and I love every minute of it! It's a challenge, but I love it.

Depth & Complexity augments and enriches **existing** projects and lessons.
